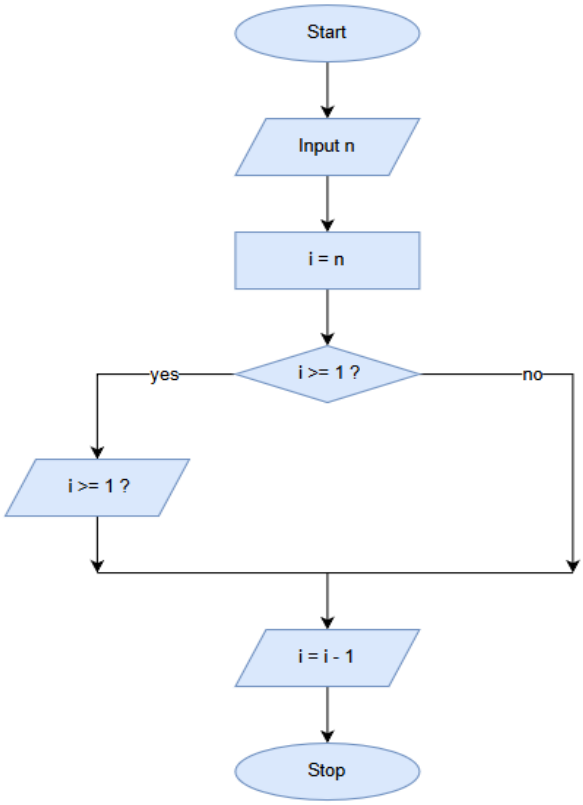
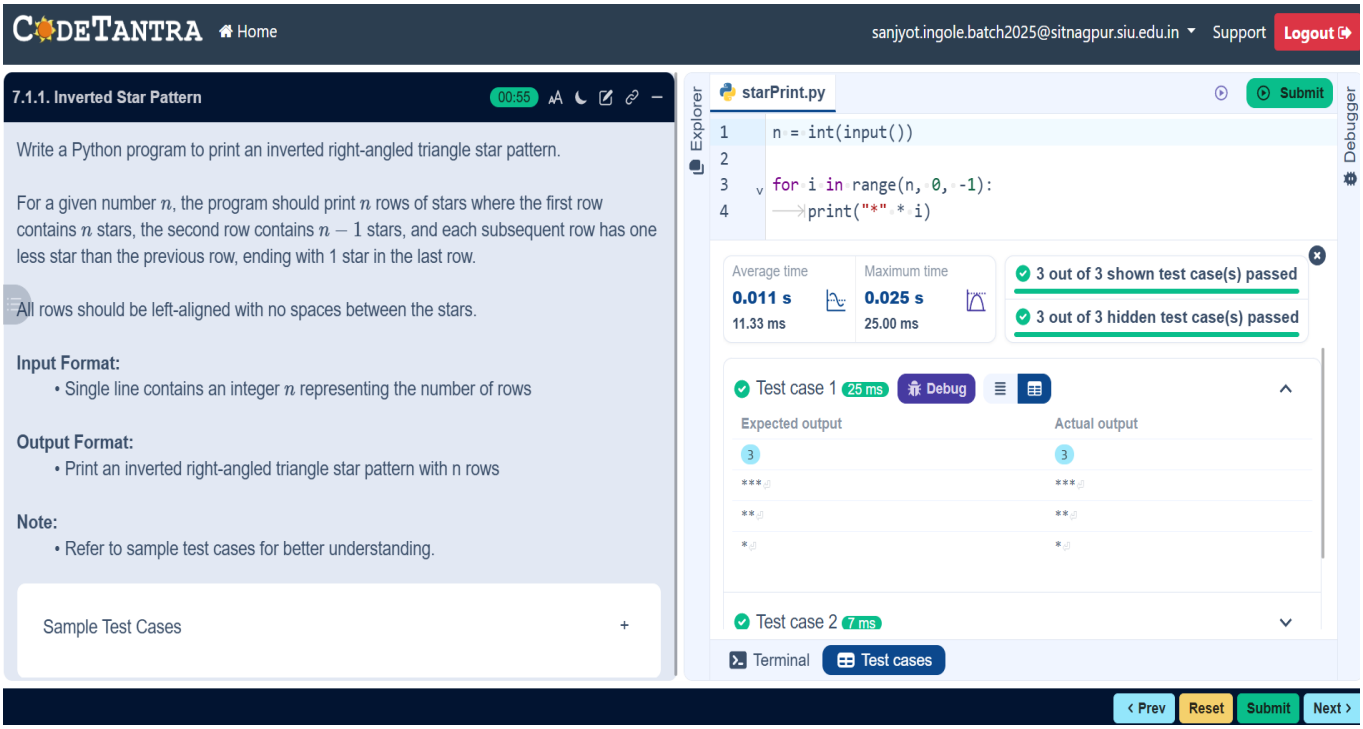
Experiment 7.1.1: Inverted star pattern

Algorithm

1. **Start**
2. Read integer input n
3. Initialize loop from i = n down to 1
4. For each value of i:
    - Print "*" repeated i times
5. End loop
6. **Stop**

Flowchart





Experiment 7.1.2: Possible 3-digit Combinations

Algorithm:

1. **Start**
2. Input three integers a, b, c
3. Store them in a list: digits = [a, b, c]

4.Use a loop i from 0 to 2.

5.Inside it,use loop j from 0 to 2

6. Inside the second loop, use a third loop k from 0 to 2.

7.Check condition:

- If i ≠ j, jk, and i ≠ k, then the indices are different.

8. Print the combination digits[i] + digits[j] + digits[k].

9. Continue until all loops finish generating combinations.

10. Stop the program.
