Experiment 3.1.1

Algorithm: Find the Largest of Three Numbers

Step 1: Start
Step 2: Read three integers a, b, and c
Step 3: If a > b then
→ If a > c, print a
→ Else, print c
Step 4: Else (a ≤ b)
→ If b > c, print b
→ Else, print c
Step 5: Stop

3.1.1. Largest of Three Numbers

08:32

Write a Python program that prompts the user to enter three integers. Print the largest of the three integers.

Input Format:

- The program will prompt the user to enter three integers, one per line.

Output Format:

- The output will display the largest integer among the three integers.

Sample Test Cases +

Explorer largestNu... Submit Debugger

```python
a = int(input())
b = int(input())
c = int(input())

if a >= b and a >= c:
    largest = a
elif b >= a and b>= c:
    largest = b
else:
    largest = c
print(largest)
```

Experiment 3.1.2

Algorithm: Convert Celsius to Fahrenheit

Step 1: Start
Step 2: Read temperature in Celsius (celsius)
Step 3: Calculate Fahrenheit using the formula

$$fahrenheit = \left(celsius \times \frac{9}{5}\right) + 32$$

Step 4: Display the Fahrenheit value
Step 5: Stop

3.1.2. Celsius to Fahrenheit

05:01

Write a Python program to convert temperature from Celsius to Fahrenheit.

Formula:

$$\text{Fahrenheit} = \left(\text{Celsius} \times \frac{9}{5}\right) + 32$$

Input Format:

- Single line contains a float value representing the temperature in Celsius.

Output Format:

- Print the temperature in Fahrenheit as a float value formatted to 2 decimal places.

Sample Test Cases +
